MUNI BALAJI N

Java Backend Developer — Spring Boot — Microservices — REST APIs

+91 9014067795 — munibalaji.dev@gmail.com — LinkedIn — GitHub — Bangalore, India

CAREER OBJECTIVE

Java Backend Developer with a strong foundation in **Java and Spring Boot,** gained through hands-on projects involving **microservices architecture, RESTful APIs, and inter-service communication using OpenFeign.** Experienced in building a **4-service e-commerce system** with **Spring Data JPA, MySQL, DTO-based aggregation, and structured exception handling.** Eager to contribute as a fresher, contributing to and learning from **real-world backend systems.**

TECHNICAL SKILLS

Frontend Technologies: HTML, CSS.

Programming & CoreTechnologies: Java, Object-Oriented Programming (OOPs), Collections, Exception Handling, and Multi Threading.

Backend Frameworks & Libraries: Spring Boot, Spring Data JPA, Spring Cloud Gateway, Jakarta Validation, JDBC

API Development: REST API Design, OpenFeign, Rest Template, JSON

Databases: MySQL, SQL

Architecture & Design Patterns: Microservices Architecture, API Gateway Pattern, Layered Architecture (Controller-Service-Repository), DTO Pattern

Tools & Platforms: Git, GitHub, Swagger, Maven, IntelliJ IDEA

INTERNSHIP

Java Full Stack Intern at TAP Academy 06/2026 — 12/2026

- Building strong fundamentals in **Core Java, OOP concepts, Collections, and Exception Handling, JDBC** through structured coursework and hands-on coding exercises.
- Developing **RESTful APIs and backend services** using **Spring Boot and Spring Data JPA** through guided, project-based training modules.

PROJECTS

E-Commerce Microservices Platform | *Java, Spring Boot, Microservices, REST APIs*

- Designed and developed a **4-service e-commerce backend system** (Customer, Product, Order, and API Gateway) using **Spring Boot**, demonstrating end-to-end **microservices architecture** and **inter-service communication**.
- Built a **centralized API Gateway** using **Spring Cloud Gateway** as the single entry point for all client requests, configuring **path-based routing rules** to hide internal service structure from external clients.
- Implemented full **CRUD operations** across services with a **3-layer architecture** (Controller, Service, Repository), applying the **DTO pattern** and **manual entity-DTO mapping** for clean separation of concerns.
- Integrated **OpenFeign** for synchronous inter-service communication, enabling the Order Service to fetch and aggregate customer and product data into unified, **DTO-based responses** eliminating direct entity relationships across services.
- Applied **Jakarta Validation** for data integrity, **pagination, sorting, and filtering** (by product price, order status, etc.) for efficient and scalable data retrieval.
- Implemented a **Global Exception Handler** for centralized, structured error responses across all services.
- Followed **clean code principles** and consistent package structuring (controller, service, repository, dto, exception) across all microservices for maintainability.

EDUCATION

Bachelor of Computer Applications (BCA), Emeralds Degree College, SVU (Grade: 80%) 06/2023 — 05/2026
Tirupati, Andhra Pradesh, India
